# THE NATIVE PLANT CENTER

AT WESTCHESTER  
COMMUNITY COLLEGE

NEWSLETTER  
NUMBER 16

FIRST NATIONAL AFFILIATE  
OF THE  
LADY BIRD JOHNSON WILDFLOWER CENTER

## UPCOMING EVENTS

February 18 - *Mariellé Anzelone*  
Making a Personal Herbarium

March 1  
Plant Pre-Sale Order Deadline

March 4 - *A. Megaro & B. Fischer*  
Sow & Grow Natives Workshop

March 17 - *Dr. Steve Clemants,  
Dr. Douglas Tallamy & Larry Weaner*  
NDAL: Nature in the Suburbs

March 25 - *Brooke Beebe*  
Why Go Wild?  
Introduction to Native Plants

April 8 - *Carol Capobianco*  
Audubon At Home

April 22 - 26 - *Phone for Details*  
Garden Tour of Virginia

April 29 - 10 a.m. - 1 p.m.  
2006 Wildflower & Native Plant Sale

June 10 - (Rain Date: June 11)  
Fundraiser at a local garden

June 17 - *Dolores R. Santoliquido*  
Sketching in the Garden

July 15  
Garden Conservancy Open Day  
Free Guided Tours - 12 noon - 4 p.m.  
Park in Lot # 1 at West. Comm. College

NPC Members' Spring Field Trip  
Lasdon Park Chestnut Research

RESERVATIONS REQUIRED FOR  
MOST EVENTS LISTED ABOVE.  
PHONE (914) 606-7870 FOR DETAILS.

## NPC TEAMS UP WITH NEWFS TO EXPAND 7<sup>TH</sup> ANNUAL NATIVE PLANT SALE INVENTORY

by Carolyn Summers, Plant Sale Co-Chair

What's the best way to ward off the dreaded mid-winter blues? The answer for gardeners is obvious: order new plants for spring from *The Native Plant Center*! Members will get the Plant Pre-Sale list soon, and by ordering early will have the best chance of getting some truly extraordinary plants this year. Plant Sale date is Saturday, April 29 from 10 a.m. to 1 p.m. at Westchester Community College.

This year, we have teamed up with the **New England Wild Flower Society (NEWFS)**, the venerable institution based in Massachusetts that runs Garden in the Woods, to offer plants from their expanded nursery operation. (See interview with Bill Cullina on last page of newsletter). This partnership will allow us to offer plants rarely available in the commercial nursery trade, but be aware that quantities may be limited, **so order early!** These rare plants are ethically propagated and true to name.

In addition, we are fortunate to be able to again offer locally propagated plants from NYC Parks' **Greenbelt Native Plant Nursery** on Staten Island and are pleased to have gained another new, local source, **Pinelands Nursery**

in New Jersey. We are expanding our offering of smaller groundcovers and grasses sold in quantities to include more native annuals and short-lived perennials. Finally, in response to numerous requests, we are offering even more shade plants this year. Look for more traditional woodlanders, ferns, plus an aster, a goldenrod and even a vine that all love shade!

Visit our website for photos of individual plants in the Pre-Sale. For design suggestions to stimulate your creative vision, expert Ruth Rogers Clausen is providing mini-meadow and shade garden designs using the plants from our Pre-Sale list. Look for these on our website at [www.nativeplantcenter.org](http://www.nativeplantcenter.org).

In order of bloom, here are some highlights of our spring sale. The plants profiled below were all grown by NEWFS, except cardinal flower.

**Canada anemone, *Anemone canadensis*.** This little beauty is a superb groundcover for moist shade. Blooming in late May, the flowers can be up to 2" across and look like snowflakes nestled on the deeply dissected foliage (similar to wild geranium). Once established, this

Continued on page 2

## THE NATIVE PLANT CENTER AND NDAL PRESENT 3RD PROFESSIONAL LEVEL CONFERENCE - NOT JUST FOR PROFESSIONALS

On Friday, March 17 at Westchester Community College, *The NPC* will co-sponsor *Nature in the Suburbs: Ecology for Designers and Planners* with New Directions in the American Landscape (NDAL), an organization focused on educating professionals about native/natural landscape design. Although planned for landscape architects, designers, planners and other professionals, it will be of interest to anyone interested in ecological landscaping.

Dr. Douglas Tallamy (University of Delaware), Dr. Steven Clemants (Brooklyn

Botanic Garden) and Larry Weaner (Larry Weaner Landscape Design Associates) will make a case for the importance of suburban habitat, and show how to design properties that are attractive to wildlife, yet address the practical needs and aesthetic sensibilities of clients.

The speakers' message is that ecological design is not only sensible for designers to consider, but that enhancing the biodiversity of suburban properties can significantly contribute to the health of our environment, creating havens for people *and* wildlife.

**NOT A MEMBER? GET YOUR FREE COPY OF THE PLANT PRE-SALE LIST!  
VISIT OUR WEBSITE AT [WWW.NATIVEPLANTCENTER.ORG](http://WWW.NATIVEPLANTCENTER.ORG) FOR THE  
2006 WILDFLOWER & NATIVE PLANT PRE-SALE LIST, OR PHONE  
(914) 606-7870 FOR YOUR COPY. ORDER DEADLINE: MARCH 1.**

## CONTINUOUS SUPPORTERS

*Our deepest thanks go to our previous members who continue to support our mission: educating people about the environmental necessity, economic value, and natural beauty of native plants in the Northeast.*

## Native Plant Sale Expansion

Continued from page 1

deciduous groundcover will steadily creep into drier spots, but can be easily removed, unlike some spreaders. It is a plant of delicate texture and in habit most like that of the spreading *Tiarella*. It covers, never smothers, and plays nicely with others.

**Flame azalea**, *Rhododendron calendulaceum* 'Smoky Mountaineer.' Eastern North America is blessed with many species of beautiful wild azaleas and Flame azalea has the largest blossoms of them all. Blooming in May, colors range from yellow through orange all the way to copper. This rare variety, 'Smoky Mountaineer,' resides in the collection at Arnold Arboretum and was acquired from cuttings brought back from a collecting trip in the Great Smokies. 'Smoky' is way over on the red side of the spectrum for Flame azalea (and maybe should be renamed 'Fiery Mountaineer'). A spectacular shrub, either as a specimen or at the wood's edge, it can grow to 10' tall and will take full sun or part shade. Once established, it is quite drought tolerant. **Limited quantities available, so order early; we expect to sell out!**

**Spikenard**, *Aralia racemosa*. This beautiful and unusual denizen of rich woods also goes by the interesting name Life-of-Man (shapely and highly aromatic rootstocks are similar to those of its cousins, ginseng and sarsaparilla). Widely branching plants 2-5' tall with large heart-shaped leaves catch every bit of available light that reaches the woodland understory. Unlike many spring-blooming woodland herbs, some of which are dormant by midsummer, Spikenard saves its large tapered flower cluster for late June and into July. The clusters are made up of tiny white flowers often tinted yellow or green. By autumn, these flowers produce

showy wine red to dark purple berries. Add stature and grace to the shade garden, and light up the midsummer woods with its blossoms.

**Tall meadow rue**, *Thalictrum polygamum*. The clouds of puffy white plumes on this magnificent plant bring sparkle to the mid-summer border or woodland edge. It lives up to its name, usually topping out at 8' tall, but it can go as high as 10' in the moist meadows it naturally inhabits, and will reach 6-7' easily in ordinary average to dry garden soil. Tall meadow rue always seems to bloom when it will do the most good, late June to early July, when nothing much is happening in the garden. The leaves are similar to Columbine leaves (the two plants are in the same family) and turn lovely shades of purple in the fall. If you want offspring, plant more than one; male and female flowers are on separate plants.

**Cardinal Flower**, *Lobelia cardinalis*. This plant proves the old adage, "If you plant it, they will come." "They" being, in this case, hummingbirds. No sooner had my newly-planted cardinal flowers bloomed than a hummingbird appeared. I had to pinch myself the first time. Brilliant red spikes starting in late July into August are reason enough to plant this showy native, but the hummingbirds are a definite bonus. Combine with red trumpet honeysuckle, *Lonicera sempervirens* 'Blanche Sandman', which we are also offering this year, and the hummingbirds will really thank you! Individual cardinal flowers are not long lived but multiply readily by seeds and offsets. (I plant a few new ones every year, just to be sure.) Avoid covering the basal leaves with mulch in fall, as crowns may rot. Cardinal flowers range from 18"-30" tall and like moist shade or a nice wet swale or streambank. Also great in your "rain garden", i.e., next to your downspout!

---

## SKETCHING IN THE GARDEN with Artist Dolores R. Santoliquido

Saturday, June 17 - 10 a.m. - 2:30 p.m. - Bring lunch

Sketch the botanical bounty of *The Native Plant Center's* Garden during the height of spring bloom. Sketching is an essential tool which promotes a better understanding of subject matter. Artists of all abilities are welcome to come develop and fine tune drawing skills. The focus of this session will be to observe plants in nature, decide what is important to document and learn how to compose balanced compositions. Come prepared to spend an enjoyable, relaxed day sketching in the garden. A supply list will be provided with your confirmation.

*Dolores R. Santoliquido has been an adjunct professor of art at Manhattanville College since 1983, is an instructor in the New York Botanical Garden Art and Illustration Certificate Program and has taught workshops at the Morton Arboretum, Lisle, IL, and the Humboldt Institute, Stuen, MN. Dolores works in watercolor, graphite, pen and ink, color pencil and specializes in working with mixed media acrylic and color pencil. She's an active member of the American Society of Botanical Artists, The New Canaan Artist Society, The Canton Artists' Guild and is currently the vice president of the Guild of Natural Science Illustrators.*

**Registration Form on back of Lecture Series Page**

## NPC HAS POSITIVE IMPACT ON THE COMMUNITY: HOW FAR OUR ROOTS HAVE SPREAD IN SEVEN YEARS

*The Native Plant Center* continues to educate people about native plants through diverse programming. We are pleased to report that our roots have grown far beyond Westchester County over the past seven years. Our goal continues to be to share these resources with you.

The new year gives us the opportunity to reflect on what we've done over the past few years. In 2004-05, we welcomed Penny Hofmann, Mark Phelan, Heather Sandifer, Denise Santomero and Carolyn Summers to our Steering Committee. Pat Keesee and Betty Wamsley happily passed the Chair position to Barbara Fischer. Without these and other dedicated volunteers, very few of the following activities would have happened. Here are a few highlights:

**Awards:** To our two Demonstration Gardens from the Ninth Federated Garden Clubs, Inc.

**Educational trips:** Chicago, Mt. Cuba Center, National Academy Museum,

Stone Barns Center, Lasdon Arboretum, Kensico Cemetery.

**Education:** Professional conference co-sponsored with New Directions in the American Landscape, lectures on growing plants from seeds, composting, organic lawns, edible flowers and drawing.

**Fundraising:** The 2005 Native Plant Sale, the 2005 Art and Photography Show, tour of the Warden Garden.

**Outreach:** Dedication of the Stone Cottage Garden, Garden Conservancy Open Day, school garden consultation.

**Public Policy and Advocacy:** Project Wildflower (see Native News below). In addition to the six native wildflower meadows along the Taconic Parkway in Westchester, the NYS Department of Transportation has continued to plant natives in Ulster County on the Hurley Rail Trail and 9W/32, and along the Taconic in Dutchess and Columbia counties.

## NATIVE NEWS

Brooke Beebe  
Director of The Native Plant Center

Project Wildflower was initiated in 1999 by a community-based committee to create native wildflower meadows along NY highways. *The Native Plant Center* took the lead as the liaison between the committee and the NYS Department of Transportation, which resulted in six wildflower meadows now flourishing along the Taconic State Parkway.

Due to the success of these plantings, the NYSDOT has gone ahead and planted 5.55 more acres of wildflowers. See above article for more details. Congratulations to the NYSDOT for caring about biodiversity.

\*\*\*\*\*

According to the folks at Monarch Watch, a group dedicated to the monarch butterfly, ". . .the evidence continues to mount; the all-time low monarch population of 2.19 hectares in 2004/2005 will soon be a distant memory. Large numbers of monarchs began to arrive in the vicinity of the overwintering sites during the last days of October." Find more details at [www.monarchwatch.org](http://www.monarchwatch.org).

Heather Sandifer  
Co-Chair 2006 Art and Photography Show

This year's lovely *Visions of Nature* Art and Photography Show & Sale once again hosted its Annual Gala and Lecture Luncheons. The Gala was given a solid boost by the addition of a silent auction. Items for auction included a weekend in NYC (which sold twice!), a tour of Stone Barns, three lovely retro quilts and tickets to *La Cenerentola*. It's never too early to think of items to include next year! Our auction will be quality rather than quantity. Items such as weeks/weekends away, photography, art or other lessons, event tickets, restaurant meals, wine, private downtown holiday parking spaces and spa, garden design or other services will all be welcome.

We need ideas and offers! Please contact *The Native Plant Center* at [wcc.nativeplant@sunywcc.edu](mailto:wcc.nativeplant@sunywcc.edu), or phone (914)606-7870 with ideas or donations.

All donations help further our fund raising efforts which support our mission: **Educating the community of the environmental necessity and economic value of native plants throughout the Northeast.**

2005

## ANNUAL FUND DONORS

*Our thanks to all who contributed to the Annual Fund. We are pleased to report over \$5,000 was raised.*

## INTERVIEW WITH BILL CULLINA OF THE NEW ENGLAND WILD FLOWER SOCIETY

by Carolyns Summers, 2006 Plant Sale Co-Chair

This year, we are pleased to be working with the New England Wild Flower Society (NEWFS) to offer many special plants for sale. Based in Massachusetts, NEWFS is the oldest native plant conservation organization in the United States and is headquartered at a lovely 30-acre woodland preserve known as Garden in the Woods (a great place to visit!). The Society maintains extensive northeastern plant collections, including one section of the Garden devoted entirely to rare and endangered plants. In addition to maintaining the Garden, NEWFS has developed educational programs (even offering a certificate in native plant studies) and science-based field studies, including native plant inventories, and conservation and restoration of endangered species. Current work also focuses on monitoring and mapping the spread of exotic invasive plants and documenting their impact on rare native plants.

With the recent purchase of the 75-acre Nasami Nursery in western Massachusetts, NEWFS has greatly expanded its retail plant sales. For our presale preview, I interviewed Bill Cullina, Director of Nurseries, chief propagator, and author of the bestselling garden guides *Native Wildflowers* and *Native Trees, Shrubs and Vines*, by phone.

**How do you choose which plants to offer?** (This question brought a chuckle. There are so many factors to consider.)

*He said that the primary consideration is the availability of seed or other propagule sources. NEWFS has its own stock for many, but not all plants. There is always the challenge to expand the inventory and try new plants. For many reasons, Bill emphasizes local native plants. He observed that hybrids of western lupine have proven invasive in the eastern U.S. and eastern plants such as salt marsh grass have invaded western sites. Because gardeners, not ecological restoration scientists, are the primary purchasers of the nursery's plants, Bill is always on the look-out for "cute" new plants. There is a need to wean gardeners away from known invasive plants still offered by nurseries as well as trendy new exotics that may prove to be invasive. With the additional space at Nasami Nursery, a current goal is to expand the offering of trees and shrubs.*

**What contributions do native plant gardeners make to the overall environmental health of our region?**

*Even small steps are important. By planting just a few native plants, we can participate in the web of life that still surrounds us. For example, there are approximately 2000 species of moths in Connecticut, many of which need specific host plants. Just a few plants may host a few caterpillars, helping to insure the continuation of these species. Hopefully, gardening with native plants fosters sensitivity to broader issues of conservation of species, including rare species.*

# THE NATIVE PLANT CENTER'S 2006 SPRING LECTURE SERIES

## Making a Personal Herbarium

*Mariellé Anzelone*  
Saturday, February 18  
10 – 12 noon at WCC

In the Victorian era, it was all the rage to have a personalized herbarium. Today, collections of pressed and mounted plants are again surging in popularity. Learn how to make a personalized record of the flora on your property. A discussion of the history of herbaria and how they are used in plant conservation and research today will precede a step-by-step demonstration on the construction of an herbarium sheet. These individual specimens may brighten a room as a wall hanging while serving as a botanical primer.

*As a botanist and urban ecologist, Mariellé Anzelone's work focuses on preserving the floristic diversity of the five boroughs through conservation, management, and restoration practices.*

## WHY GO WILD? INTRODUCTION TO NATIVE PLANTS

*Brooke Beebe*  
Saturday, March 25  
10 - 12 noon at WCC

Many gardeners are curious about native plants and wildflowers, what they are, and why they should consider planting them. Others are seeking ways to have low-maintenance, chemical-free gardens. Here's an opportunity to learn about the amazing variety and beauty of our own Northeastern native plants and why they're so beneficial from the Director of The Native Plant Center. See which native trees, shrubs and perennials will enhance your landscape and learn which plants will attract birds and butterflies.

*Brooke Beebe has been the Director of The Native Plant Center at Westchester Community College since it was founded in 1998. The NPC is the first national affiliate of the Lady Bird Johnson Wildflower Center, which is located in Austin, Texas.*

## Sow & Grow Natives Workshop

*Anne Megaro and Barbara Fischer*  
Saturday, March 4  
9:30 – 11:30 a.m. at WCC

Planting zinnia seeds is one thing. Sowing and growing native plants from seed is quite another! Learn how to sow native seeds (such as butterfly weed and columbine) at this hands-on workshop. Seeds, pots and soil will be provided. Techniques for transplanting the seeds once they have germinated will be demonstrated as well. Participants will be able to take home a seeded pack for their own gardens. **Space limited! Supply fee inc.**

*Anne Megaro has been teaching planting techniques for 20 years at Wildcliff Greenhouse in New Rochelle. As Field Coordinator for Groundwork Yonkers, Inc., she works on environmental projects.*

*Barbara Fischer, a Master Gardener, runs the after-school greenhouse program for The Children's Village in Dobbs Ferry. She is the Chair of the NPC's Steering Committee.*

## NATURE IN THE SUBURBS: ECOLOGY FOR DESIGNERS AND PLANNERS

*Dr. Steve Clemants, Dr. Douglas Tallamy, Larry Weaner*  
Friday, March 17 (Snow Date - Monday, March 20 )  
8:30 a.m. - Continental Breakfast  
9:00 a.m. - Lecture begins at WCC - Lunch Optional

### Rationale: Creating Habitat in Suburbia

Dr. Tallamy's presentation will focus on biodiversity: why we need it, why we need to redesign suburbia to save it, why it depends on native plants and what the suburban ecosystem should look like.

**Foundation: Understand the Ecology of Your Area**  
Landscapes that occur naturally develop in specific compositions, patterns and sequences. In this presentation, ecologist Steven Clemants will illustrate how native plant communities can serve as design models for landscaped gardens.

**Application: Ecology and Design** — Panel Discussion  
Larry Weaner will sum up the design implications of the presentations with some practical solutions he has initiated in his own design practice.

**READ ARTICLE ON PAGE ONE FOR FURTHER DETAILS.**  
For info about Continuing Ed Units (CEU) call (914) 606-7870.

## AUDUBON AT HOME: CREATING A HEALTHY YARD

*Carol Capobianco*  
Saturday, April 8  
10 - 12 noon at WCC

Your yard is your private outdoor space. It also can be a means to saving birds and the environment. The individual actions you take around your home, such as planting natives, minimizing your lawn, and eliminating pesticides, can lead to healthier habitats

for people and other creatures. Learn how to develop an action plan for your yard that will create a safe haven for your family and for wildlife.

*Carol Capobianco is Project Manager of Audubon At Home, a program of the National Audubon Society that encourages individuals to create healthy habitats in their yards. Previously, she headed the Saw Mill River Coalition, where she initiated the River Rats program, engaging citizen volunteers in streamside habitat restoration.*

## NATURE IN THE SUBURBS - SPEAKER BIOGRAPHIES

**Dr. Steven Clemants** is Vice President of Science at Brooklyn Botanic Garden where he has worked for the past 16 years. He is also Co-director of the Center for Urban Restoration Ecology, President of Nature Network and Chair of the Invasive Plant Council of New York State. He has been studying the plants of New York for the past 20 years.

**Dr. Douglas Tallamy** is a Professor and Chair of the Department of Entomology and Wildlife Ecology, University of Delaware, where he has conducted research on plant/insect interactions since 1981. Doug received his Masters degree from Rutgers University and his Ph.D. from the University of Maryland. His experience with insect behavior has led to his current interest in how alien plants are reducing food required by birds and other animals for reproduction.

**Larry Weaner** is principal of Larry Weaner Landscape Design, a firm specializing in the design of native landscape gardens. He also is past board member and environmental committee chair of the Association of Professional Landscape Designers and founder of the New Directions in the American Landscape conference series.
